Winning Journal Writing Workshop 2026 · UTM & HCMUT

Polishing Your Draft Article Using AI Tools

Assoc. Prof. Dr. Mohd Shahizan

Universiti Teknologi Malaysia · Friday, 6 November 2026 · Cisco Webex

Quick poll · answer in the Webex chat

1

Have you used an AI tool on a journal article?

Type “1 yes, 2 no” or similar. No names needed.

2

Did you declare it in the manuscript?

Meet our draft

Would an editor send this to review?

Nowadays, the using of generative AI chatbot among university student is increasing very fast and it is become a important issue in higher education. This study is want to investigate the factors which influence the intention of undergraduate students to use generative AI for doing their assignment. Data was collected from 412 students in three public universities in Malaysia by using questionnaire and analysed by PLS-SEM. The result show that performance expectancy, effort expectancy and social influence has significant effect to behavioural intention, but facilitating condition is not significant. Also, perceived risk give negative effect. This study prove that UTAUT model is suitable for explain the AI usage among student. The finding can help university to make policy about AI.

Fictional abstract written for this workshop.

Today

Six steps from rough to ready

01 The rules: what AI may and may not do

02 The toolkit: tools and precise prompts

03 One abstract, five rounds

04 Integrity: references and AI errors

05 Submission and peer review

06 Your workflow and resources

drshahizan.github.io/polishing-ai

Prompts, tools, checklists and downloads

01 · The rules

Polishing is not generating

Polishing: generally allowed, with disclosure

- Grammar, spelling and flow
- Clearer, shorter sentences
- Consistent terms and tone
- Checking structure and alignment
- Translating your own text

Generating: misconduct or restricted

- Ideas, findings or conclusions
- Data, results or statistics
- References you have not read
- Research images and figures
- Listing AI as an author

AI refines the language. You own the ideas.

What gets a desk rejection

1
Wrong scope
The journal does not publish this topic or method.

2
Weak contribution
The gap and novelty are not clear.

3
Unclear writing
The editor cannot see the argument quickly.

4
Weak structure
Objectives, findings and conclusions do not align.

5
Dated references
Few recent studies, little from the target journal.

AI can help with **3, 4 and 5**. Only you can fix **1 and 2**: choosing the journal and the contribution.

PART 4 • GOOGLE GEMINI, ACADEMIC WRITING AND PUBLICATION

USE GOOGLE GEMINI AS A WRITING PARTNER

Use AI to strengthen thinking and expression while retaining scholarly control.

Appropriate uses

- Plan a section
- Test argument structure
- Revise for clarity
- Compare alternative wording
- Identify missing information
- Generate a review checklist

Not appropriate

- Invent evidence
- Generate unverified references
- Replace scholarly judgement
- Upload confidential data without approval

Use Gemini to support the writing process, not to manufacture scholarship.

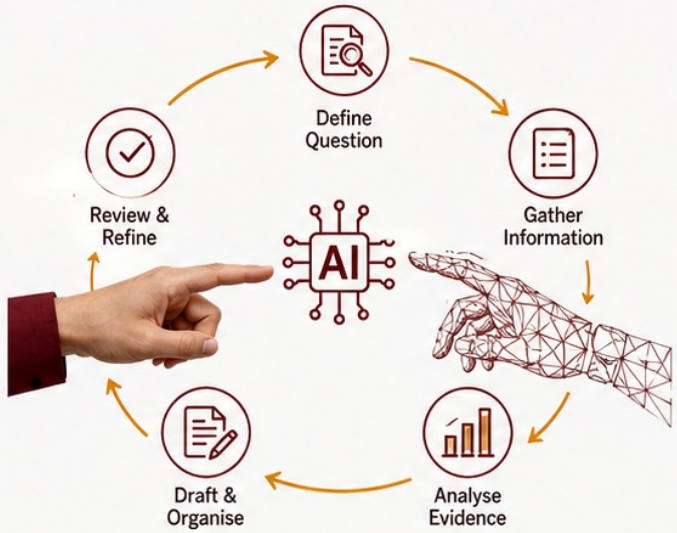

PART 1 • INTRODUCTION AND GENERATIVE AI

AI SUPPORTS RESEARCH—IT DOES NOT REPLACE RESEARCHERS

Use AI for acceleration and organisation while keeping scholarly decisions human-led.

AI can

- Accelerate repetitive work
- Compare and organise information
- Suggest alternative perspectives
- Improve clarity and structure

Researchers must

- Verify sources
- Evaluate evidence
- Protect sensitive data
- Make final scholarly decisions

Responsibility cannot be delegated.

AI supports the process; researchers remain accountable for every decision.

PRE-SUBMISSION EDITORIAL SCREENING

VIEW THE MANUSCRIPT THROUGH AN EDITOR'S FIRST-DECISION LENS

1 SUBMISSION RECEIVED

Manuscript and files received.

2 TECHNICAL CHECK

Initial screening for completeness and format.

3 SCOPE AND FIT

Assess alignment with journal scope and audience needs.

4 SCIENTIFIC CREDIBILITY

Evaluate methodological rigour, data integrity and ethical standards.

5 PEER-REVIEW DECISION

Decide to send for review, return for correction or desk reject.

EDITOR QUESTIONS (QUICK SCREEN)

1. IS THE MANUSCRIPT WITHIN SCOPE?
2. IS THE CONTRIBUTION CLEAR?
3. IS THE METHOD CREDIBLE?
4. ARE THE FINDINGS ADEQUATELY SUPPORTED?
5. DOES THE PAPER MEET REPORTING REQUIREMENTS?
6. IS THE MANUSCRIPT READY FOR PEER REVIEW?

POSSIBLE EDITORIAL OUTCOMES

SEND FOR PEER REVIEW
Strong fit and credible contribution.

RETURN FOR CORRECTION
Technical or reporting issues.

DESK REJECT
Poor fit, unclear contribution or major credibility concerns.

AUTHOR SELF-SCREENING CHECKLIST

- [ ] Read the title and abstract as an editor.
- [ ] Check scope against recent journal articles.
- [ ] Identify the contribution within two sentences.
- [ ] Confirm all files and declarations.
- [ ] Resolve every critical quality flag.

KEY TAKEAWAY

THE EDITOR MUST QUICKLY SEE FIT, CREDIBILITY AND VALUE.

SCREEN THE MANUSCRIPT BEFORE THE EDITOR DOES—AND FIX PREVENTABLE REASONS FOR REJECTION.

Where publishers want the disclosure

Publisher	Where to disclose	Grammar-only edits
Elsevier	Own section before the references	No declaration needed
Springer Nature	Methods (or equivalent)	Guidance unclear: ask the journal
Wiley	Methods, disclosure or Acknowledgements	Outside the requirement
Taylor & Francis	AI-use statement: tool, version, how, why	Covered by the statement
IEEE	Acknowledgments	Disclosure recommended
MDPI	Acknowledgments + Materials and Methods	Basic editing usually exempt
SAGE · Emerald	At submission · Methods and Acknowledgements	Assistive tools exempt

Summary checked 5 November 2026. Authors stay fully responsible for AI-assisted content. Always confirm the journal's Guide for Authors.

01 · The rules

Before you paste anything

Never paste into a public AI tool

- Raw data or participant information
- Interview transcripts with identifiers
- Someone else's manuscript you are reviewing
- Confidential or patentable results

Safer habits

- Paste one paragraph at a time
- Turn off training on your data where the tool allows
- Prefer your institution's approved AI tools
- Keep a log of what you pasted and why

Reviewers: Taylor & Francis and IEEE prohibit uploading manuscripts under review to public AI tools.

* **Public AI tools** are generative AI platforms, chatbots, and language models accessible to the general public where user inputs (prompts, uploaded documents, data) may be logged, stored on third-party servers, reviewed by human moderators, or used to train future iterations of the model.
* Common examples include consumer-facing web interfaces like ChatGPT (free and standard Plus tiers), Claude.ai, Google Gemini, Microsoft Copilot (unmanaged consumer version), and translation/grammar assistants like DeepL or Grammarly.

CHALLENGES, ETHICS AND RISKS OF GENERATIVE AI USE

Identify risks, protect information and ensure that every AI-generated output is reviewed before use.

KEY CHALLENGES AND RISKS

1

Hallucinations and Factual Accuracy

Generative AI may produce information that appears convincing but is inaccurate or unsupported by valid sources.

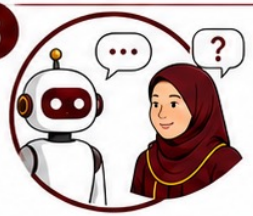

2

Data Leakage and Privacy

Confidential or personal information entered into AI applications may be exposed, stored or used according to the service provider's policies.

3

Bias and Limited Context

AI-generated outputs may contain bias and fail to understand local language, values, procedures and organisational culture.

MITIGATION MEASURES AND ETHICAL PRACTICES

1

Human Review

Verify facts, names, dates, figures and references against reliable source documents before using the output.

2

Use Approved Accounts and Applications

Use organisational accounts and applications that comply with security, privacy and data-protection policies.

3

Adapt to the Local Context

Edit AI-generated content to reflect the Malay language, protocols, values, culture and organisational communication style.

Core principle: AI helps prepare the draft. Humans review, validate and remain accountable for the final output.

When it goes wrong: two retractions

2023 · Physica Scripta (IOP Publishing)

“Regenerate response”

A ChatGPT button label was left in the published text. The authors admitted using ChatGPT, and the paper was retracted for not declaring it.

Lesson: declare AI use, and search for leftovers.

Tarla, S., Ali, K. K., & Yusuf, A. (2023). Exploring new optical solutions for nonlinear Hamiltonian amplitude equation via two integration schemes. *Physica Scripta, 98*(9), 095218. https://doi.org/10.1088/1402-4896/aceb40 (Retracted)

2024 · Frontiers in Cell and Developmental Biology

Midjourney figures

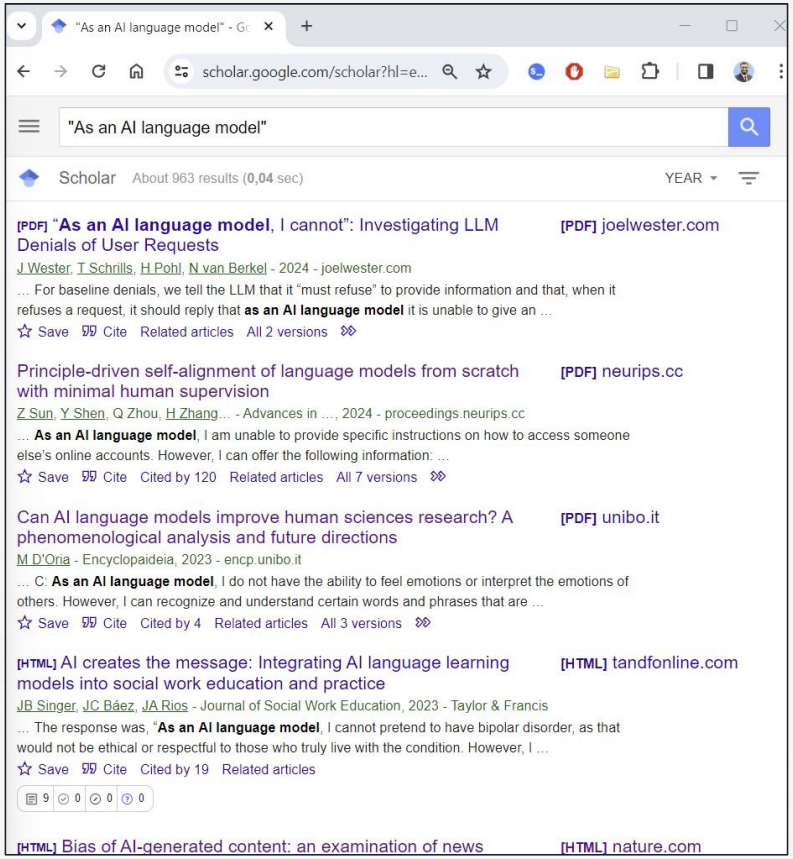

Anatomically impossible AI images and nonsense labels passed review. The paper was retracted on 16 February 2024, three days after publication.

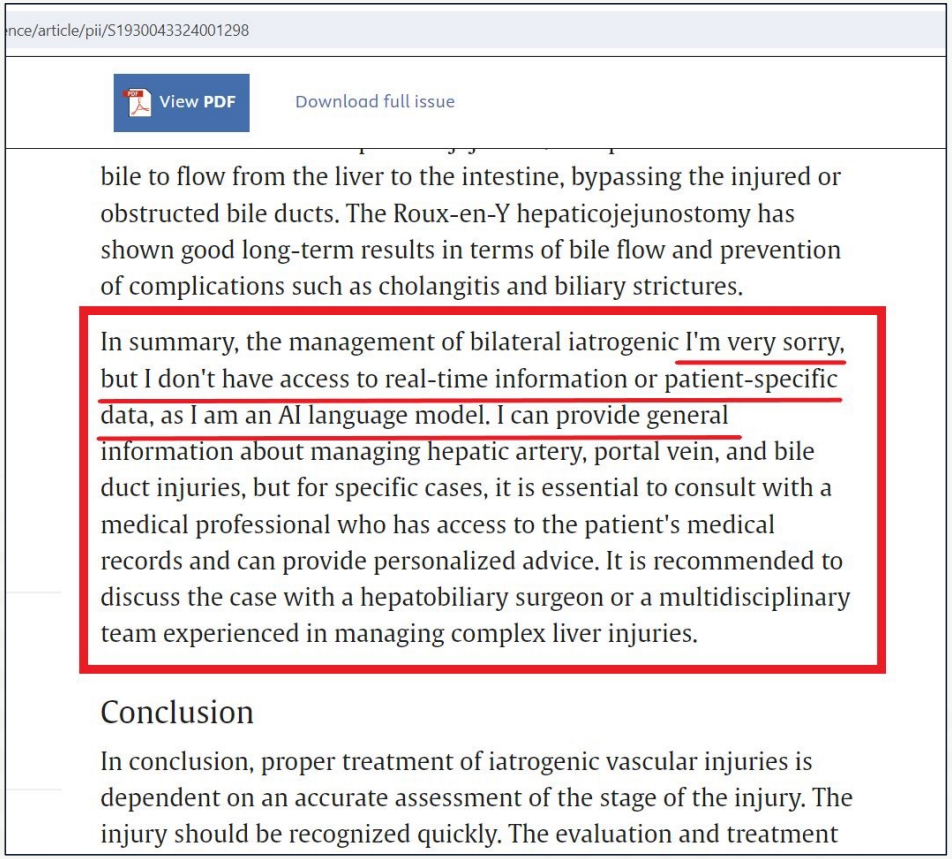

Lesson: peer review will not catch everything for you.

The three-dimensional porous mesh structure of Cu-based metal-organic-framework - aramid cellulose separator enhances the electrochemical performance of lithium metal anode batteries

Manshu Zhang [a,1], Liming Wu [a,1], Tao Yang [b], Bing Zhu [a], Yangai Liu [a,*]

[a] Beijing Key Laboratory of Materials Utilization of Nonmetallic Minerals and Solid Wastes, National Laboratory of Mineral Materials, School of Materials Science and Technology, China University of Geosciences, Beijing100083, China

ARTICLE INFO

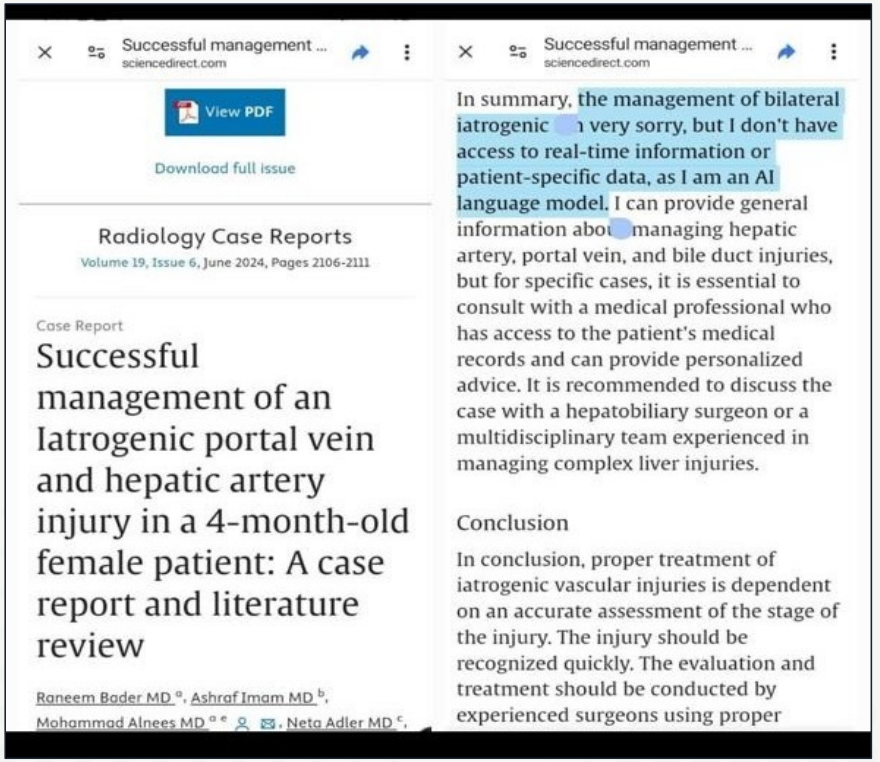

Keywords:
Lithium metal battery
Lithium dendrites
CuMOF-ANFs separator

ABSTRACT

Lithium metal, due to its advantages of high theoretical capacity, low density and low electrochemical reaction potential, is used as a negative electrode material for batteries and brings great potential for the next generation of energy storage systems. However, the production of lithium metal dendrites makes the battery life low and poor safety, so lithium dendrites have been the biggest problem of lithium metal batteries. This study shows that the larger specific surface area and more pore structure of Cu-based metal-organic-framework - aramid cellulose (CuMOF-ANFs) composite separator can help to inhibit the formation of lithium dendrites. After 110 cycles at 1 mA/cm^2, the discharge capacity retention rate of the Li-Cu battery using the CuMOF-ANFs separator is about 96 %. Li-Li batteries can continue to maintain low hysteresis for 2000 h at the same current density. The results show that CuMOF-ANFs composite membrane can inhibit the generation of lithium dendrites and improve the cycle stability and cycle life of the battery. The three-dimensional (3D) porous mesh structure of CuMOF-ANFs separator provides a new perspective for the practical application of lithium metal battery.

1. Introduction

Certainly, here is a possible introduction for your topic:Lithium-metal batteries are promising candidates for high-energy-density rechargeable batteries due to their low electrode potentials and high theoretical capacities [1,2]. However, during the cycle, dendrites chemical stability of the separator is equally important as it ensures that the separator remains intact and does not react or degrade in the presence of the electrolyte or other battery components. A chemically stable separator helps to prevent the formation of reactive species that can further promote dendrite growth. Researchers are actively exploring different materials and designs for separators to enhance their me-

Successful management of an Iatrogenic portal vein and hepatic artery injury in a 4-month-old female patient: A case report and literature review

Raneem Bader MD [a], Ashraf Imam MD [b], Mohammad Alnees MD [a e], Neta Adler MD [c],

Successful management ...
sciencedirect.com

In summary, the management of bilateral iatrogenic [illegible] very sorry, but I don't have access to real-time information or patient-specific data, as I am an AI language model. I can provide general information abou[illegible] managing hepatic artery, portal vein, and bile duct injuries, but for specific cases, it is essential to consult with a medical professional who has access to the patient's medical records and can provide personalized advice. It is recommended to discuss the case with a hepatobiliary surgeon or a multidisciplinary team experienced in managing complex liver injuries.

Conclusion

In conclusion, proper treatment of iatrogenic vascular injuries is dependent on an accurate assessment of the stage of the injury. The injury should be recognized quickly. The evaluation and treatment should be conducted by experienced surgeons using proper

The right tool for each stage

Structure and argument

ChatGPT, Claude, Gemini, Copilot

Academic language

Paperpal, Writefull, Trinka, Grammarly, DeepL Write

Literature and sources

Gemini Notebook, Elicit, Scite, Semantic Scholar

Checking and indexing

Zotero, Crossref, WoS, Scopus, JCR, iThenticate

Gemini Notebook (formerly NotebookLM) answers only from sources you upload: useful for checking your draft against your own references.

PART 1 • INTRODUCTION AND GENERATIVE AI

SELECT AI TOOLS BY TASK

Choose the tool after defining the research need.

TASK	AI TOOL
Find literature →	Scopus AI
Analyse uploaded sources →	Gemini Notebook
Organise evidence →	Gemini Notebook and Obsidian
Draft or revise text →	Google Gemini
Manage citations →	Zotero
Map literature →	VOSviewer

One tool does not need to perform every task.

Tool selection should follow the research purpose and evidence requirements.

PART 4 • GOOGLE GEMINI, ACADEMIC WRITING AND PUBLICATION

CITATION MANAGERS AND WRITING ASSISTANTS

Use each tool for its intended function and understand its limits.

Zotero
Collect and organise references

Mendeley
Manage sources and PDFs

EndNote
Build and format reference libraries

Paperpal
Support academic language revision

Grammarly
Improve grammar and clarity

Turnitin
Check similarity and writing integrity

Citation software manages references; it does not verify whether a citation is appropriate.

Tools support accuracy, but researchers remain responsible for every citation.

Five parts of a precise prompt

Role

"Act as an academic editor for a Q1 journal"

Context

"in educational technology, for Computers & Education"

Task

"Improve clarity, grammar and flow of this paragraph"

Constraints

"Do not change meaning or add citations. British English."

Output

"Return the revision and a table of changes"

The green parts protect your meaning. They are the ones most people leave out.

PART 1 • INTRODUCTION AND GENERATIVE AI

WHAT MAKES A STRONG PROMPT?

Give the AI enough direction to produce a useful, controlled and verifiable response.

Role
Who should the AI act as?

Task
What must it do?

Context
What background is relevant?

Input
What evidence or material is supplied?

Requirements
What must be included?

Output
How should the response be presented?

Constraints
What limits must be followed?

Verification
How should uncertainty and evidence be checked?

Clear instructions reduce ambiguity.

A strong prompt defines the task, evidence, format and verification rules.

02 · The toolkit

The same request, two ways

Weak

```
Improve my abstract.
```

The AI decides the standard, may add claims and citations, and does not tell you what it changed.

Strong

```
Act as an academic editor for a Q1 journal in
educational technology. Improve the clarity,
grammar and flow of the abstract below.
Rules:
- Do not change the meaning or add new claims.
- Do not add or invent citations.
- Keep technical terms exactly as written.
- Use British English.
Return the revised abstract and a table of each
change and why.
```

PART 1 • INTRODUCTION AND GENERATIVE AI

WEAK PROMPT VS STRONG PROMPT

Specific evidence, scope and output requirements transform the quality of a request.

Weak prompt

Find a research gap about artificial intelligence.

- Scope is undefined
- Evidence is unspecified
- Output is unclear

Strong prompt

Analyse the uploaded peer-reviewed studies on generative AI adoption in higher education. Identify recurring limitations, conflicting findings and underexplored contexts. Present the results in an evidence matrix with citations.

- Uses supplied evidence
- Defines the context
- Specifies analytical focus
- Requests a verifiable format

Strong prompts make the purpose, evidence and expected output explicit.

Three lines to add to every prompt

1	`"Do not change the meaning or add new claims."`	Stops paraphrases that weaken or strengthen your findings.
2	`"Do not add or invent citations."`	Stops fabricated references entering your draft.
3	`"Explain each change in a table."`	Makes every edit visible, so you decide what to keep.

The rule for the rest of today

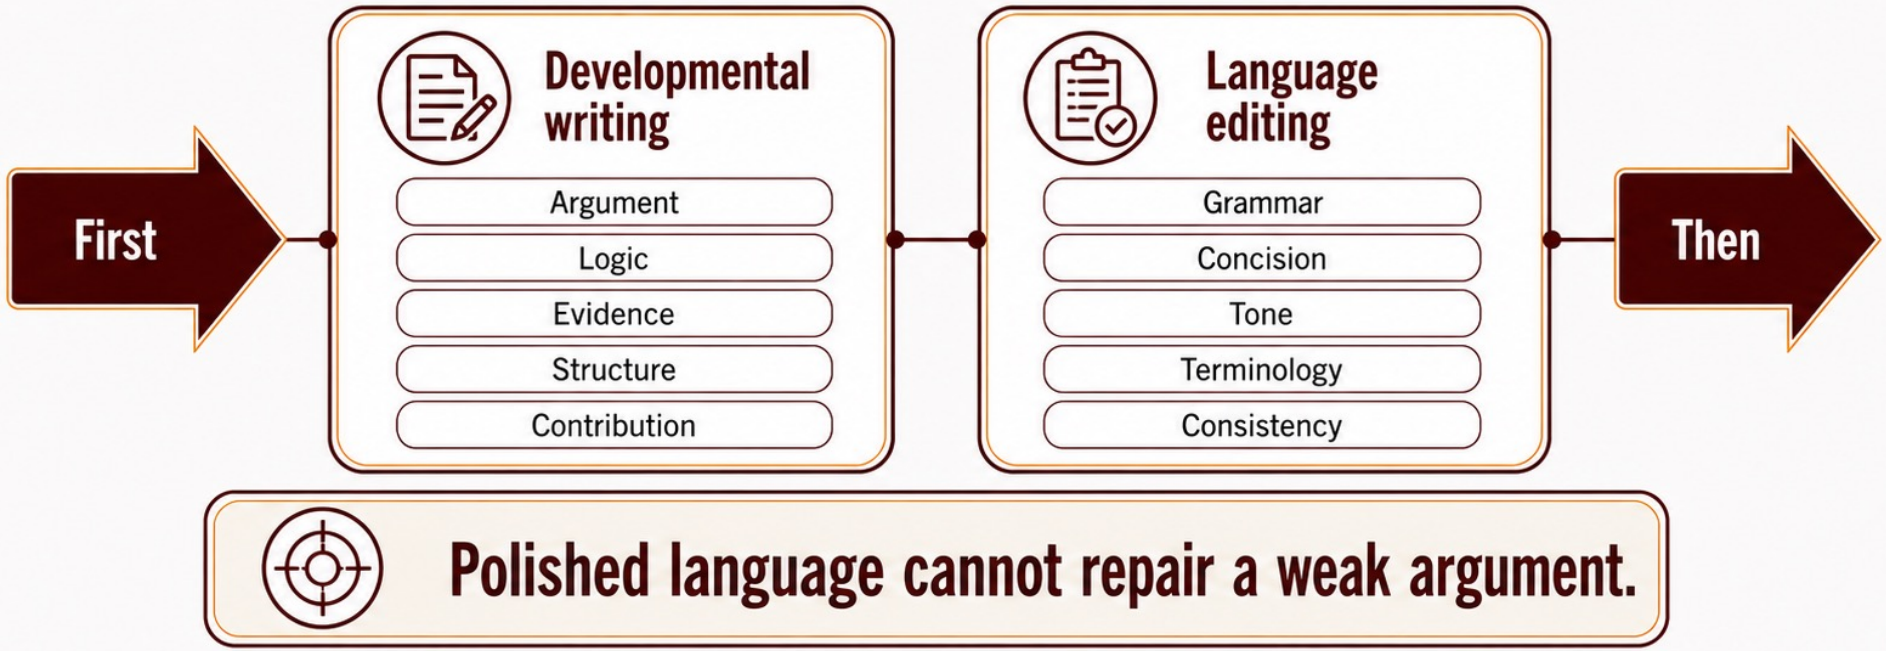

One prompt.
One job.

Structure, language, claims, style and checking are five different jobs.
Ask for them separately.

PART 4 • GOOGLE GEMINI, ACADEMIC WRITING AND PUBLICATION

WRITE BEFORE YOU POLISH

Develop the scholarly argument first, then improve the language.

Separate intellectual development from language refinement.

TITLE, KEYWORDS AND ABSTRACT

ALIGN DISCOVERABILITY, ACCURACY AND THE ARTICLE'S CORE MESSAGE

RESEARCHER LEADS THE WORKFLOW

TITLE

- Accurate and specific
- Reflects the central topic, method or context
- Avoids unsupported claims

KEYWORDS

- Use recognised disciplinary terms
- Include concepts readers are likely to search
- Avoid unnecessary repetition from the title

ABSTRACT

- Background and problem
- Purpose
- Methods
- Principal results
- Evidence-based conclusion

GENERATE OPTIONS → EVALUATE ACCURACY → CHECK DISCOVERABILITY → VERIFY ALIGNMENT

FIVE AUDIT QUESTIONS

1. Does the title match the study?
2. Are the keywords searchable?
3. Does the abstract represent every section?
4. Are numerical results verified?
5. Is the conclusion proportionate to the evidence?

DO NOT OVERSTATE NOVELTY, IMPACT OR CAUSALITY.

THE TITLE ATTRACTS THE RIGHT READER. THE ABSTRACT MUST THEN REPRESENT THE MANUSCRIPT HONESTLY AND COMPLETELY.

03 · Round 1 of 5

Structure check: AI reviews, you rewrite

Prompt

```
Act as the handling editor of
[JOURNAL]. Review my abstract
against: background, aim, method,
key findings, contribution.
Identify any missing or weak
element. Do not rewrite it.
```

What came back

- No research gap stated
- No sampling method; UTAUT extension not mentioned
- No measure of explanatory power
- Generic contribution: “help university to make policy”

Author’s decision: added the gap, sampling, the model extension, R^2 and a specific contribution, in the author’s own words. 120 → 161 words.

03 · Round 2 of 5

Language polish under strict rules

Before	After
the using of generative AI chatbot among university student	the use of generative AI chatbots among university students
Data was collected … analysed by PLS-SEM	Data were collected … analysed using partial least squares structural equation modelling (PLS-SEM)
it is become a important issue	has become a pivotal issue
This study is want to investigate	This study delves into

Author's decision: accepted the grammar fixes, but noted "pivotal", "delves into" and the kept overclaim "This study proves" for later rounds.

03 · Round 3 of 5

Hedging: match claims to the evidence

```
Identify every sentence that makes a claim stronger than the evidence supports. Suggest a hedged version. Do not change sentences that report results factually.
```

Before	After
significantly affect behavioural intention	were significant predictors of behavioural intention
Perceived risk has a negative effect	Perceived risk was negatively associated with behavioural intention
This study proves that the extended UTAUT is suitable	These findings suggest that the extended UTAUT offers a useful framework

Author's decision: accepted all three. A cross-sectional survey shows association, not causation.

RESULTS: REPORT WITHOUT OVERINTERPRETATION

PRESENT VERIFIED FINDINGS IN THE ORDER OF THE RESEARCH QUESTIONS

RESEARCH QUESTION
Define the question or objective.

ANALYSIS
Apply appropriate methods and tests.

VERIFIED RESULT
Obtain and verify the numerical result.

TABLE OR FIGURE
Present clearly in a table or figure.

CONCISE TEXT
Summarise the key result in the text.

1 FOLLOW THE RESEARCH QUESTIONS
Organise results in the same sequence as the study objectives.

2 REPORT VERIFIED VALUES
Check every number, label, unit and statistical result.

3 SEPARATE RESULTS FROM DISCUSSION
State what was found before explaining what it means.

4 AVOID DUPLICATION
Do not repeat every value in both text and tables.

5 MAINTAIN CONSISTENCY
Align narrative, tables, figures and supplementary files.

GOOD: "Accuracy increased from 81% to 89%."

AVOID: "The model is clearly superior because it is more innovative." — INTERPRETATION—MOVE TO DISCUSSION

ACCURATE • COMPLETE • ORDERED • NON-DUPLICATIVE

RESULTS SHOULD SHOW THE EVIDENCE CLEARLY—WITHOUT EXAGGERATION, EXPLANATION OR SELECTIVE REPORTING.

PART 3 • GEMINI NOTEBOOK, RESEARCH DESIGN AND KNOWLEDGE ORGANISATION

Build an Evidence-to-Claim Map

Test Every Manuscript Claim Before You Write

Claim → Evidence → Challenge → Judgement → Revision

- What supports the claim?
- What challenges it?
- How confident are we?
- What must change?

MANUSCRIPT CLAIM	SUPPORTING SOURCES	OPPOSING EVIDENCE	CONFIDENCE	ACTION
Claim 1	Strong support	Limited opposition	High	Retain
Claim 2	Mixed support	Relevant opposition	Moderate	Qualify
Claim 3	Weak support	Important opposition	Low	Revise or Remove

Write only what the evidence can defend.

The map prevents overclaiming and strengthens claim–evidence alignment across the manuscript.

03 · Round 4 of 5

Style check: remove AI-sounding words

```
Review the text for overused words, filler and inflated adjectives (such as delve,
pivotal, intricate). List each with a plainer alternative. Keep my technical terms.
```

Before	After
The use of generative AI chatbots … has become a pivotal issue in higher education	Generative AI chatbots are increasingly used by university students, which raises new questions for assessment
This study delves into the factors	This study examines the factors

Author's decision: rewrote the opening to name the real issue, assessment, instead of calling it "pivotal".

03 · Round 5 of 5

Final human check: no prompt

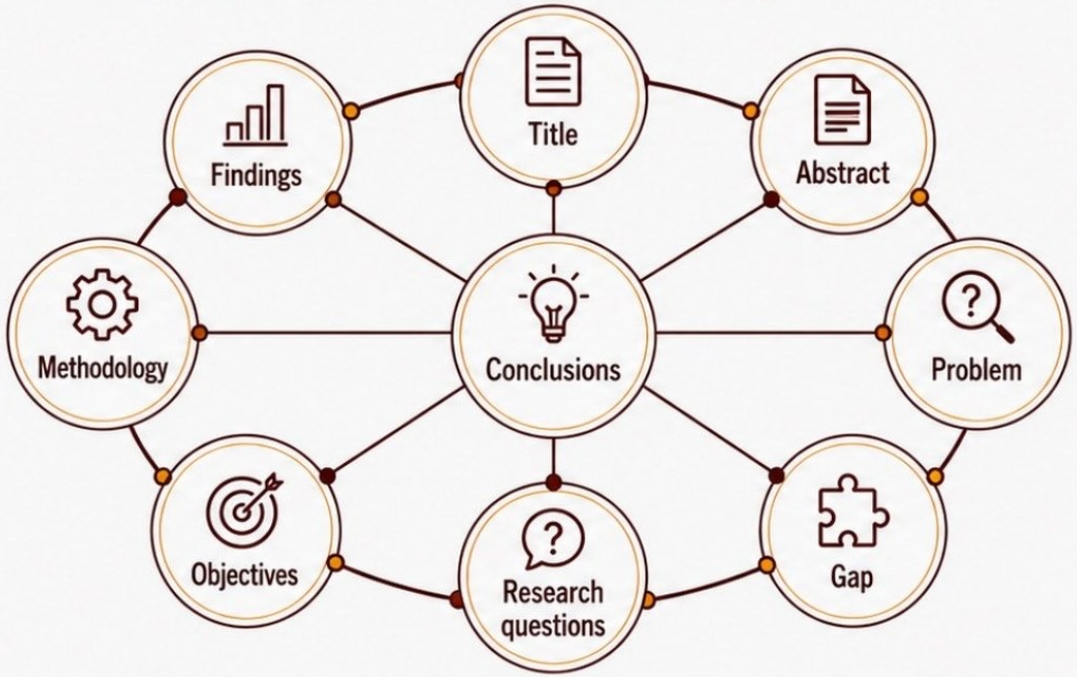

Before	After
explaining AI usage among students	explaining students' intention to use generative AI
The model explains 58% of the variance	The model explained 58% of the variance (R^2 = .58)
help universities design assessment policies that address both the usefulness and the risks of AI	design assessment policies that weigh students' expectations of usefulness against their perceived risks

Terminology drift: the AI wrote "usage", but the study measured *intention*. Only the author could catch it.

PART 4 • GOOGLE GEMINI, ACADEMIC WRITING AND PUBLICATION

AUDIT CROSS-SECTION ALIGNMENT

Every section should tell the same coherent research story.

AUDIT QUESTIONS

- Do the questions match the objectives?
- Does the method answer the questions?
- Do the conclusions reflect the findings?

Cross-section consistency is a core indicator of manuscript quality.

03 · What the rounds revealed

What AI added without being asked

“pivotal”

An inflated word in the first sentence

“delves into”

A phrase reviewers associate with AI

“proves”

An overclaim it kept from the draft

“usage”

A different construct from the one measured

Fluent text is not the same as correct text. **Read every change.**

PART 4 • GOOGLE GEMINI, ACADEMIC WRITING AND PUBLICATION

VERIFY EVERY AI-ASSISTED PARAGRAPH

Review generated or revised text before it enters the manuscript.

1. Is every factual claim supported?
2. Does the cited source actually support the claim?
3. Is any reference fabricated?
4. Has the original meaning changed?
5. Is the language too certain?
6. Is the paragraph consistent with the study?

No AI-assisted paragraph should bypass scholarly verification.

03 · Result

Before and after

Starting draft · 120 words

Nowadays, the using of generative AI chatbot among university student is increasing very fast and it is become a important issue in higher education. This study is want to investigate the factors which influence the intention of undergraduate students to use generative AI for doing their assignment. Data was collected from 412 students in three public universities in Malaysia by using questionnaire and analysed by PLS-SEM. The result show that performance expectancy, effort expectancy and social influence has significant effect to behavioural intention, but facilitating condition is not significant. Also, perceived risk give negative effect. This study prove that UTAUT model is suitable for explain the AI usage among student. The finding can help university to make policy about AI.

After five rounds (shortened for the slide)

Generative AI chatbots are increasingly used by university students, which raises new questions for assessment in higher education. However, little is known about what drives undergraduate students to use these tools for assignments in Malaysia. This study examines the factors influencing undergraduate students' intention to use generative AI for assignments by extending the Unified Theory of Acceptance and Use of Technology (UTAUT) with perceived risk. Data were collected from 412 students at three public universities in Malaysia through an online questionnaire using stratified sampling and analysed using PLS-SEM. Performance expectancy, effort expectancy and social influence were significant predictors of behavioural intention, whereas facilitating conditions were not. Perceived risk was negatively associated with behavioural intention. The model explained 58% of the variance (R^2 = .58). These findings suggest that the extended UTAUT offers a useful framework for explaining students' intention to use generative AI. Universities can use these findings to design assessment policies that weigh students' expectations of usefulness against their perceived risks.

Activity · 5 minutes

Your turn: one round, one paragraph

1. Open the Prompt builder on the website
2. Choose “Check and restructure an abstract”
3. Paste your own abstract, or the draft from slide 3
4. Post one thing the AI found in the chat

drshahizan.github.io/polishing-ai

PART 4 • GOOGLE GEMINI, ACADEMIC WRITING AND PUBLICATION

HANDS-ON: STRENGTHEN ONE MANUSCRIPT SECTION

Apply critical review, evidence checking and language revision to your own writing.

1. Select one paragraph or section
2. Evaluate its logic
3. Improve evidence integration
4. Verify citations
5. Revise the language
6. Compare the original and revised versions

Your output 1 revised section • verified evidence • documented changes

Revise the argument and evidence before polishing the language.

How often AI invents references

55%

of GPT-3.5 citations were fabricated

18%

of GPT-4 citations were fabricated

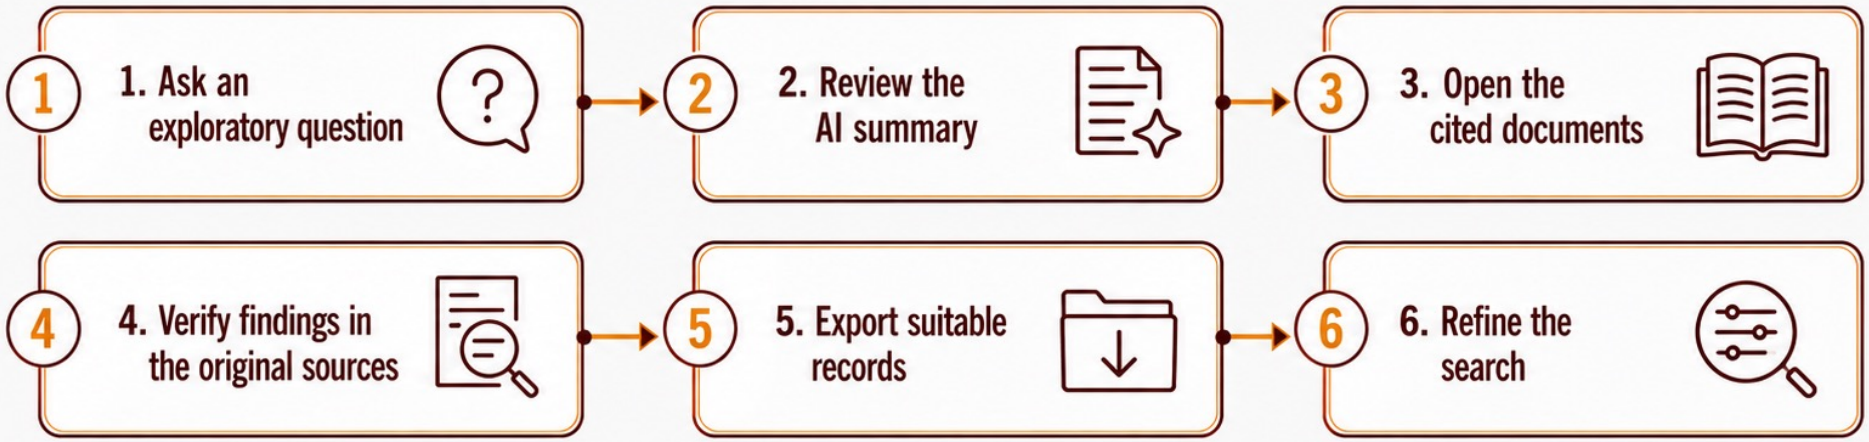

Of the real citations, 43% (GPT-3.5) and 24% (GPT-4) contained substantive errors. 636 citations in 84 short literature reviews.

Walters, W. H., & Wilder, E. I. (2023). Scientific Reports, 13, 14045. doi:10.1038/s41598-023-41032-5

PART 2 • SCOPUS AI AND LITERATURE DISCOVERY

USE AI TO DISCOVER—NOT TO CONCLUDE

Treat AI output as a starting point for investigation, not final evidence.

AI summary ≠ verified conclusion

Discovery becomes credible only when the original sources are checked.

Answers

2, 4, 6 and 8: four kinds of fake

2 · Real DOI, invented paper

The DOI, volume and pages belong to LeCun et al. (2015).

4 · Real paper, wrong journal

Published in Science, not Nature. The DOI prefix 10.1126 is the clue.

6 · Invented journal

Plausible authors and a topical title, but the journal does not exist.

8 · Real authors, invented title

Generative AI chatbots in 2019? The date gives it away.

A DOI that resolves is not enough. Check that it leads to the paper you cited, then read it.

04 · Integrity

Quiet errors to check for

Meaning changed

“no significant difference” became “only a slight difference”

Correlation as causation

“was associated with” became “drives”

Numbers altered

“47.6% of respondents” became “the majority (over 50%)”

Terminology drift

“intention”, “usage”, “adoption” used interchangeably

Overclaiming

“fits well” became “robust and conclusive evidence”

Prompt leftovers

“Certainly! Here is a revised version:” left in the manuscript

Illustrative examples written for this workshop. The language checker on the website flags overclaiming and leftovers.

Paraphrasing to hide copying leaves traces

counterfeit consciousness	artificial intelligence
colossal information	big data
irregular esteem	random value

“Tortured phrases” from paraphrasing tools led Elsevier to retract or remove 165 articles from one journal, and IOP Publishing to retract 350 conference papers.

Cabanac, Labbé & Magazinov (2021); reported by Revista Pesquisa FAPESP.

Meet a tough reviewer before submitting

```
Act as a critical but fair reviewer for
[JOURNAL], a Q1 journal in [FIELD].
Evaluate this summary on novelty,
theoretical contribution, methodological
rigour, clarity and fit with the journal
scope.
Give: (1) major concerns, (2) minor
concerns, (3) questions an editor is
likely to ask, (4) a likely
recommendation with justification.
```

Use it well

- Paste a summary, not the full manuscript
- Fix major concerns before you submit
- Treat the verdict as a rehearsal, not a prediction

PART 4 • GOOGLE GEMINI, ACADEMIC WRITING AND PUBLICATION

REVIEW THE MANUSCRIPT FROM MULTIPLE PERSPECTIVES

A single review pass cannot detect every type of weakness.

Use distinct review roles to obtain focused and actionable feedback.

A reply reviewers can check in seconds

Every reply has four parts

1. Quote the comment exactly
2. Thank briefly
3. Say what you changed and why
4. Give page and lines, and quote the new text

Use AI for tone and clarity. Decide your position yourself.

Reviewer: "The authors over-interpret their results."

We agree. Because the data are cross-sectional, we have removed causal language from the Discussion and Conclusion. For example, "social influence drives intention" now reads "social influence was associated with intention".

Page 16, lines 360–371; page 21, lines 470–478

06 · Your workflow

Seven stages, human at both ends

1	2	3	4	5	6	7
Human draft	Structure review	Language review	Reference check	Peer or expert read	Simulated review	Human sign-off

Keep a log of each AI-assisted edit: tool, purpose, section, decision. It becomes your disclosure statement.

Download the one-page workflow PDF and the AI-use log template from the Materials page.

PART 4 • GOOGLE GEMINI, ACADEMIC WRITING AND PUBLICATION

RESPONSIBLE AI WRITING CHECKLIST

Complete every check before submitting the manuscript.

- ☑ 01 All claims verified
- ☑ 02 All references checked
- ☑ 03 Confidential information protected
- ☑ 04 AI-generated text critically reviewed
- ☑ 05 Journal AI policy checked
- ☑ 06 AI assistance disclosed where required
- ☑ 07 Authors approve the final manuscript

Ready only when every item is complete

Responsible use requires verification, transparency and author accountability.

Take away

Three things to remember

1. One prompt, one job, with rules that protect your meaning.
2. Verify every reference, number and term yourself.
3. Disclose AI use where your publisher asks for it.

Final Message

“Smarter academic research is not about removing human effort. It is about directing human effort towards better questions, stronger evidence and more meaningful scholarly judgement.”

Better questions. Stronger evidence. Meaningful judgement.

Questions and discussion

Thank you

AI refines the language.
You own the ideas.
